

V. RANDOM FORESTS

A random forest is an ensemble of decision trees where each base classifier is grown using a random effect.

A random forest is an ensemble of decision trees where each base classifier is grown using a random effect.

- 1) *Select a sample of the original training set and build a tree as follows:*

A random forest is an ensemble of decision trees where each base classifier is grown using a random effect.

- 1) *Select a sample of the original training set and build a tree as follows:*
 - 1) *Select m features out of the M available*
 - 2) *Pick the best split based on just those m variables*

A random forest is an ensemble of decision trees where each base classifier is grown using a random effect.

- 1) *Select a sample of the original training set and build a tree as follows:*
 - 1) *Select m features out of the M available*
 - 2) *Pick the best split based on just those m variables*
- 2) *Repeat (1) for N iterations*

A random forest is an ensemble of decision trees where each base classifier is grown using a random effect.

- 1) *Select a sample of the original training set and build a tree as follows:*
 - 1) *Select m features out of the M available*
 - 2) *Pick the best split based on just those m variables*
- 2) *Repeat (1) for N iterations*
- 3) *Predict based on majority vote of N trees*
